

Hello Everyone!

As no doubt you have become accustom FAPT is always working behind the scenes and developing new versions to make fapturbo BETTER AND STRONGER!

As per membership requests we proudly present our latest revision to an already remarkable EA.

Our newest version is aptly named **Fapturbo44Pro**. Membership is not obligated to use this newest version you may continue using version 36 as you desire.

The download procedure remains the same as previous versions. You will find the FAPTurbo44Pro in the downloads section of the members area.

FAPTURBO44PRO: Version 44: Professional Edition

Warning1: It was developed only for professional Fapturbo traders! Newer traders should use standard version FAPT36!

If you are a new to trading Forex and inexperienced we encourage you to NOT use the FAPT44 Pro and continue to use FAPT36.

The reason you should continue to use FAPT36 if you are new is because the EAs variables are adjustable for the most seasoned trader. If you error with the properties/settings of this EA you could lose a great deal of your capital or you could render the EA useless.

As an example the most common rookie trader mistake(s):

"If I make the stop loss value smaller I will have less losses" or

"If I make the EA trade around the clock I can avoid trading during the high spread zones".

If you do not understand the above statements and the implications - just use **DEFAULT SETTINGS** and you will be fine.

The standard version is intentionally hard coded so that you cannot amend the settings - It's for your own good, safety and profit!

Warning2: Both versions are EXACTLY THE SAME with respect to core algorithm. No need to discuss which one is better and safer! **THEY ARE THE SAME**. PERIOD.

How to setup Fapturbo 44?

1. You must have original standard version already installed.
2. Fapturbo3 DDL must be in the /libraries folder
You can download it here and unzip: fapturbo.com/fapturbo3dll.zip
3. Place FapTurbo44PRO.ex4 into /experts folder

You can run both version at the same time but make sure you use different magic numbers.
Activation Troubles again? Not possible. If you run it on the same account as version 36 your activation KEY will remain the same!

WHAT's NEW in FAPTURBO44PRO?

Once again, these parameters are for advanced traders ONLY. If you are new and do not comprehend precisely how making changes to the EA settings and overall outcome then PLEASE use standard version!

1. Slippage Increment Parameter was changed to "Scalper_Slippage". Now instead of using Spread+Increment for slippage we use just Scalper_Slippage value.
2. Scalper_StartWorkTimeHour and Scalper_EndWorkTimeHour were added - now you can set your own trading interval for Fapturbo. Don't forget fapturbo is designed for trading during "low" volume hours and does not trade well for every trading session.
3. Current Spread and MaxSpread value are printed on the top of the Chart information
4. ProfitLimit and LossLimit new parameters. (not tested, try on demo first and report here) You can set the target profit and loss for the session, when reaching them fapturbo will stop trading during this session.

This feature monitors the current equity when you have opened positions and displays the calculated equity in Current Profit on chart

ProfitLimit and LossLimit are set in account currency, for example USD represented as dollars and not as a percentage of pips.

5. For Email notifications we have added "Buy/Sell Order type, Equity and Balance" information.
6. Member request - but very risky feature (use with caution, for professionals only):

You can now set your own Take profit and stop loss values for Scalper trading.

FAPt36 defaults at present (in standard version they are same but inner) are:

EURGBP_TakeProfit = 6
EURGBP_StopLoss = 112
EURCHF_TakeProfit = 5
EURCHF_StopLoss = 53
GBPCHF_TakeProfit = 10
GBPCHF_StopLoss = 75
USDCAD_TakeProfit = 10
USDCAD_StopLoss = 58

7. Max spread value is no longer represented as an Integer. You can customize settings to include decimals i.e. 5.1 in place of 5 . This will help members who use brokers with fractional lot sizing.

IMPORTANT NOTE: Some of the features coded in new FAPT44Pro have not been tested. Therefore we ask that you demo these changes prior to using on your live account. We ask traders to comment on changes and the overall outcome as this is considered a works in process.
